AN INTRODUCTION TO MODULAR KITCHENS

What exactly is a modular kitchen? It is simply a term used for the modern-day kitchen furniture layout which is especially designed to optimize functionality and the use of space. These kitchens use various modules (units) of cabinets that are crafted out of diverse materials and hold kitchen accessories inside. The basic structure of a modular kitchen is extremely practical. The units on the floor are called 'base cabinet' and serve as the foundation for the kitchen worktop which is usually made out of granite, marble, tile or wood. The ones fastened on the wall for storage purpose are known as 'wall cabinets'. There is even a 'tall storage unit' created for smaller kitchen and apartments.

While these modules form the framework, a modular kitchen also constitutes wooden cabinets, counter tops, internal accessories, as well as electro-domestic gadgets like a chimney, hob, built-in oven and sink. In some high-end kitchens, a refrigerator and dishwasher may also be included. A designer usually creates the kitchen using modules of standardized sizes that can be adapted to individual spaces. The modules are used in various combinations to get a range of modular kitchens. So, it's never difficult to find one that will suit exactly what you need.

HOW TO PLAN YOUR DANUBE KITCHEN

- When you plan your kitchen, our supervisor or designer will first undertake a site visit to get all detailed measurements of your kitchen. This will also help them understand your requirements.
- If you need any extra storage space, appliances and so on, remember to inform the designer at this stage itself. This is so that your kitchen can be planned and designed in a systematic way.
- Once the cost and design of your kitchen is finalized, we will give you all the electrical, tiling and plumbing details according to the final layout.
- After all the civil work is done, our team will take the final measurements of your kitchen and will also inform you if there are any changes in design due to civil changes at the site.
- Then, we will place the order and have it delivered within the required time frame, with the finish and material selected by you.
- After installing your kitchen we will be having site inspection by our supervisor.

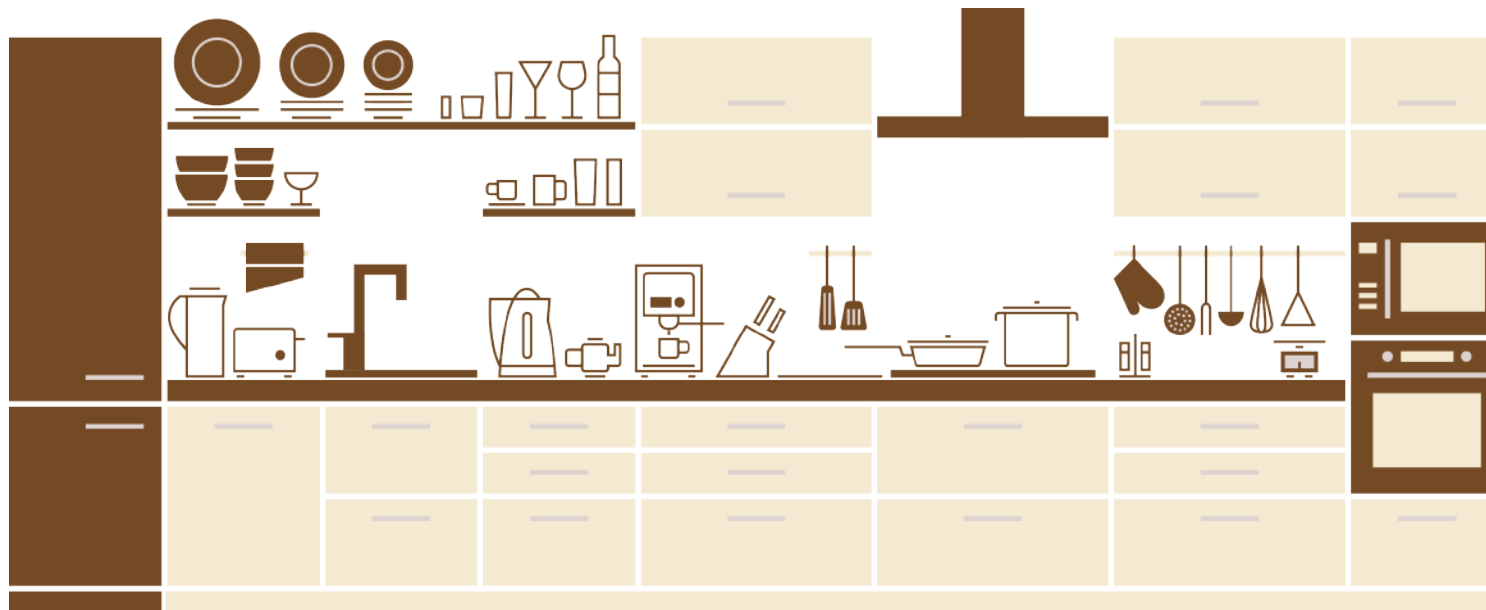

WHEN TO BUY YOUR DANUBE KITCHEN

Buying and planning your kitchen requires some expertise. Here are a few simple steps that will ensure you make the ideal choice and step it up perfectly for your home.

- There are two scenarios in which you will plan a kitchen while buying a new house, or while renovating your present home.
- In the first case, the best time to plan your kitchen is at the plastered level, before the contractor or builder provides platform.
- While renovating, it's best to plan the layout after your existing kitchen is demolished.

Site inspection as per availability of client .

Free delivery

Supply of material in 7 working days

Design & Quote with in no time.

Free installation with quality work.

*Terms & Conditions Apply

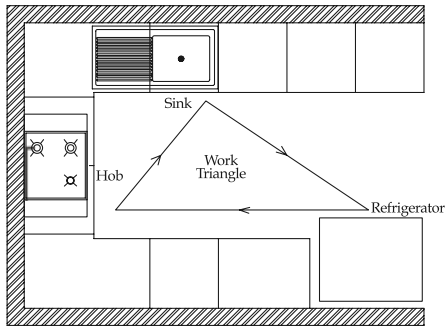

Modular kitchens come in multiple shapes, styles and arrangements. But only one thing remains common across all of them - the work triangle. This is the basic and scientific principle that has been used in designing ergonomic and functional kitchens through the years. The idea behind this is quite simple. You should be able to draw a triangle between the 3 Work Centre's of the kitchen. These are .

1. The hob – A place where the food is cooked.
2. The refrigerator – A place which is most likely to store the food.
3. The kitchen sink – A place where the food is cleaned and prepared for cooking .

Most modular kitchens are designed keeping the kitchen work triangle as their fulcrum. Offering you an extremely efficient kitchen experience.

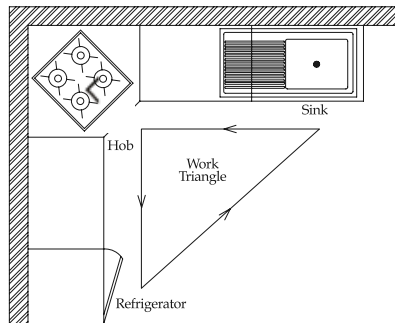

Types of KITCHEN

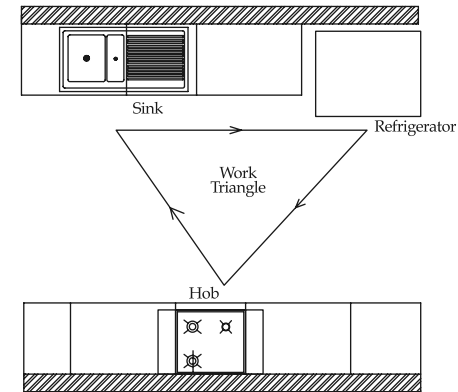

U-SHAPED KITCHEN

The U-shaped kitchen is the most versatile layout for kitchens, regardless of whether they are large or small. The layout offers continuous counter tops and ample storage, which surround the space to access the stored items easily.

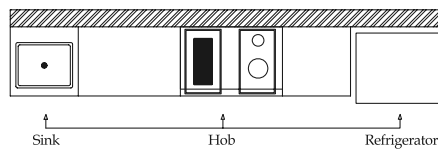

THE L-SHAPED

The L-shaped kitchen is one of the most popular models. The work triangle in this layout is uninterrupted by the movement of people and there is ample room for appliances.

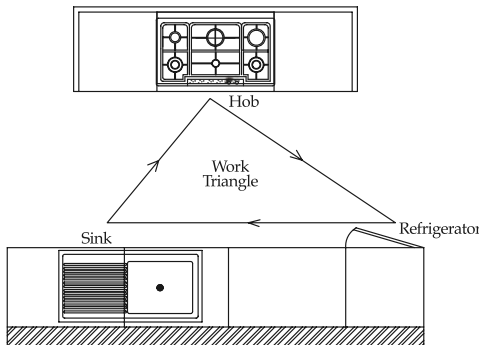

THE PARALLEL KITCHEN

The parallel kitchen has a workspace large enough for one cook. In this kitchen floor plan, the work domains face each other on parallel walls, creating a small triangle.

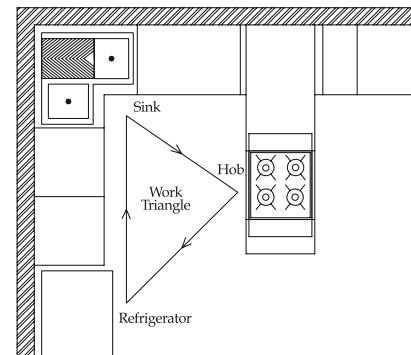

THE STRAIGHT LINE KITCHEN

The straight line kitchen floor plan is ideal for smaller kitchens. The work triangle in this kitchen layout is less like a triangle and more of a walk, with all the three main elements along one side of the wall.

THE ISLAND KITCHEN

The island kitchen has one of the three main elements, especially the hob, placed separately from the cabinets. The setup makes it look like an isolated island.

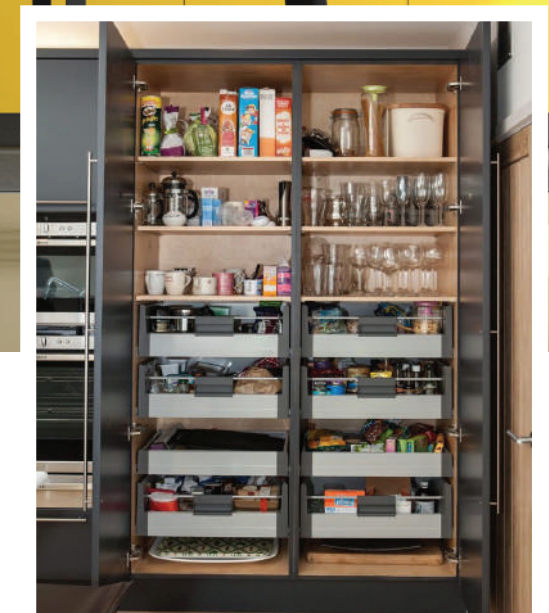

THE PENINSULA KITCHEN

In a peninsula kitchen, as the name suggests, the cabinets surround the work area in the kitchen on three sides.

MELAMINE FINISH

Simple but stylish, the flat-panel cabinet door is void of any expensive details. Its hard lines and minimalist form make it a great fit for contemporary and modern interiors. Many flat doors come in decorative laminate or wood. Laminate tends to be more budget friendly and offers a greater variety of colors and sheens.

48 Color options to choose from

LACQUER FINISH

Your cabinet door style can be one of the most important factors in your kitchen's new design. Not only are cabinet doors one of the most visible design elements in a kitchen, but they can also be one of the most expensive. From the elaborate to the simple, there's a door style for every home design. Take a look at some of the better-known styles here and see which will work for your home's style and your budget.

7 Color options to choose from

PVC FINISH

This classic style can work with a variety of budgets, depending on the wood used.

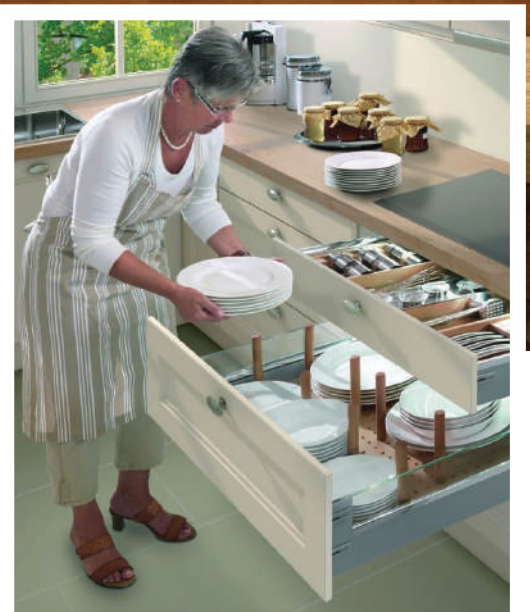

8 Color options to choose from

ACRYLIC FINISH

Premium MDF particle board with an acrylic laminate for high gloss and smooth texture. Stainless steel hardware, aluminium skirting and PVC legs complete the ensemble
